**A practical approach in bioreactor scale-up and process**

Bioreactor scale-up is a critical step in the production of therapeutic proteins such as monoclonal antibodies (MAbs). With the scale-up criterion such as similar power input per volume or O \(_2\) volumetric mass transfer coefficient (kLa), adequate oxygen supply and cell growth can be largely achieved. However, CO \(_2\) stripping in the growth phase is often inadequate.

**Scale (map) - Wikipedia**

The scale of a map is the ratio of a distance on the map to the corresponding distance on the ground. This simple concept is complicated by the curvature of the Earth's surface, which forces scale to vary across a map. Because of this variation, the concept of scale becomes meaningful in two distinct ways.
