Blind restoration and rehabilitation In 2016, approximately 130,428 veterans in the U.S. were legally blind and more

Prosthesis and orthotic options for lower extremity
Prosthetic restoration following lower extremity amputation has several goals. The first, and arguably the most important, is to reestablish functional mobility and spatial positioning of the limb. Amputation using a prosthesis requires increased energy expenditure as the amputation level moves proximal [1 8].

Myleoetral control of prosthetic hands: state of the art
Jul 27, 2016: Attempts are being made to control the hand through restoration of function of the nerves of arm with targeted muscle reinnervation (TMR) surgery to actuate the hand and through the neural interface. Current state of the art is to control the prosthetic hand using MS with various control schemes to interpret the muscle signals.

Total Ankle Replacement Rehabilitation Protocol [Dr
Avoid aggressive rotary movement at ankle both A/RPM including inversion/eversion throughout therapy program. Emphasis on restoration of sagittal plane motion to avoid prosthetic leaning. Therapy at 6wks: Once cleared by Dr. Vora, slowly transition out of CAM boot into athletic shoe (no flip-flops, unsupported shoes).
